## PROJECTS

### Giffy Random Gifs

<https://github.com/umgbhalla/k8s-course>

(April 2022 - Present)

Project covering basics of Docker container and to use those skills to prepare your application to be deployed in the cloud. This project uses giffy developer token to request random/search based gifs and allows user to add text over them. All the processing is done locally over multiple docker containers which are deployed using docker compose.

### Docker Api Template

<https://github.com/umgbhalla/api-temp>

(February 2022 - Present)

A node js based crud api templatemake to manage hospital records. Consists of one Mysql Docker container as database and one node container for backend. Includes dev deploy and productions deployment script over AWS S3

### Option Chain Visualizer
